GENERAL SUMMARY

| | |
|---------------------|--|
| Product Name | 3G mobile phone only call 911 |
| Model Name | 30711 |
| Applicant | LogicMark LLC |
| Manufacturer | APEX Global Electronics CO. Limited |
| Test Laboratory | GCCT, Guangdong Telecommunications Terminal Products Quality Supervision and Testing Center |
| Reference Standards | FCC CFR 47 Part 22(H):“FCC CFR 47 Part 22:Public Mobile Services” FCC CFR 47 Part 24(E):“FCC CFR 47 Part 24:Radio Frequency Devices” ANSI-TIA-603-C-2004 “Land Mobile FM or PM Communications Equipment Measurement and Performance Standards” |
| Test Conclusion | <p>This portable wireless equipment has been measured in all cases requested by the relevant standards. Test results in annex B of this test report are below limits specified in the relevant standards.</p> <p>General Judgment: Pass</p> <p>Date of issue:2015.07.28</p> |
| Comment | The test results in this report apply only to the tested sample of the stated device/equipment. |

3.Equipment Under Test (EUT) and Ancillary Equipment (AE)

3.1About EUT

| | |
|---------------------------------|---|
| Model Name | 30711 |
| FCC ID | TYD-GA30711 |
| Tx Frequency | WCDMA Band V : 826~846 MHz WCDMA Band II : 1852~1907 MHz |
| Rx Frequency | WCDMA Band V : 871~891 MHz WCDMA Band II : 1932~1987 MHz |
| Number of Channels | WCDMA Band V:25 WCDMA Band II: 60 |
| Modulation | WCDMA:BPSK/QPSK |
| Emission Designator | WCDMA Band V:4M16F9W WCDMA Band II: 4M18F9W |
| Antenna Type | PIFA(GSM/DCS/WCDMA) |
| Normal Voltage | 3.7V |
| Extreme Low Voltage | 3.5V |
| Extreme High Voltage | 4.2V |
| Extreme Low Temperature | -10℃ |
| Extreme High Temperature | 55℃ |

Note: Photographs of EUT are shown in ANNEX A of this test report.

Note: high and low voltage values in extreme condition test are given by manufacturer

3.2Internal Identification of EUT

| EUT ID * | IMEI | HW Version | SW Version |
|------------|------|------------|------------|
| 150540-M01 | / | M8_V1.0 | M8_V1.0 |
| 150540-M02 | / | M8_V1.0 | M8_V1.0 |

*EUT ID: is used to identify the test sample in the lab internally.150540-M01and 1502540-M02 are the same mobile phones.

3.3Internal Identification of AE

| AE ID * | Description | Type | SN |
|---------|-------------|------|----|
|---------|-------------|------|----|

| | | | |
|------------|---------|---|---|
| 150540-B01 | Battery | / | / |
| 150540-C02 | Charger | / | / |
| 150540-B02 | Battery | / | / |

*AE ID: is used to identify the test sample in the lab internally. 150540-B01 and 150540-B02 are the same accessories, 150540-C01 and 150540-C02 are the same accessories.

4. Test Results

4.1 Summary of Test Results

| Items | List | Clause in FCC | Verdict |
|-------|-----------------------------|----------------------|---------|
| 1 | Output Power | 22.913(a)/24.232(b) | Pass |
| 2 | Frequency Stability | 22.355/24.235 | Pass |
| 3 | Occupied Bandwidth | 22.917(a)/24.238(b) | Pass |
| 4 | Emission Limit | 22.917(b)/ 24.238(b) | Pass |
| 5 | Band Edge Compliance | 22.917(b)/ 24.238 | Pass |
| 6 | Conducted Spurious Emission | 22.917(a)/24.238(a) | Pass |
| 7 | Peak-to-average ratio | 24.232(d)) | Pass |

Note: please refer to Annex B in this test report for the detailed test results.

4.2 Statements

GCCT has evaluated the test cases requested by the applicant/manufacture as listed in section 4.1 of this report, for the EUT specified in section 3, according to the standards or reference documents listed in general summary.

5. Test Equipments Utilized

ANNEX B: Detailed Test Results**B.1 Output Power(22.913(a)/24.232(b))****B.1.1 Conducted Output Power Measurement****B.1.1.1 Description**

A base station simulator was used to establish communication with the EUT. Its parameters were set to transmit the maximum power on the EUT. The measured power in the radio frequency on the transmitter output terminals shall be reported.

B. 1.1.2 Test Procedures

1. The transmitter output port was connected to base station.
2. Set EUT as maximum power through base station.
3. There measurements were done at 3 frequencies, 824.2MHz, 836.6MHz and 848.8MHz for GSM850 band; 1850.2MHz, 1880.0MHz and 1909.8MHz for PCS1900 band.

B.1.1.3 Test Setup**B.1.1.4 Test Results****WCDMA Band V and Band II****Band II**

| Band/Time slot configuration | Frequency(MHz) | Channel | Power Class | Peak output power(dBm) | Verdict |
|------------------------------|----------------|---------|-------------|------------------------|---------|
| RMC (12.2kbps) | 1852.6 | 9263 | 3 | 22.94 | Pass |
| | 1880.0 | 9400 | | 22.86 | |
| | 1907.6 | 9538 | | 22.81 | |

Band V

| Band/Time slot configuration | Frequency(MHz) | Channel | Power Class | Peak output power(dBm) | Verdict |
|------------------------------|----------------|---------|-------------|------------------------|---------|
| RMC (12.2kbps) | 826.6 | 4133 | 3 | 23.01 | Pass |
| | 835.0 | 4175 | | 23.02 | |
| | 846.4 | 4232 | | 23.09 | |

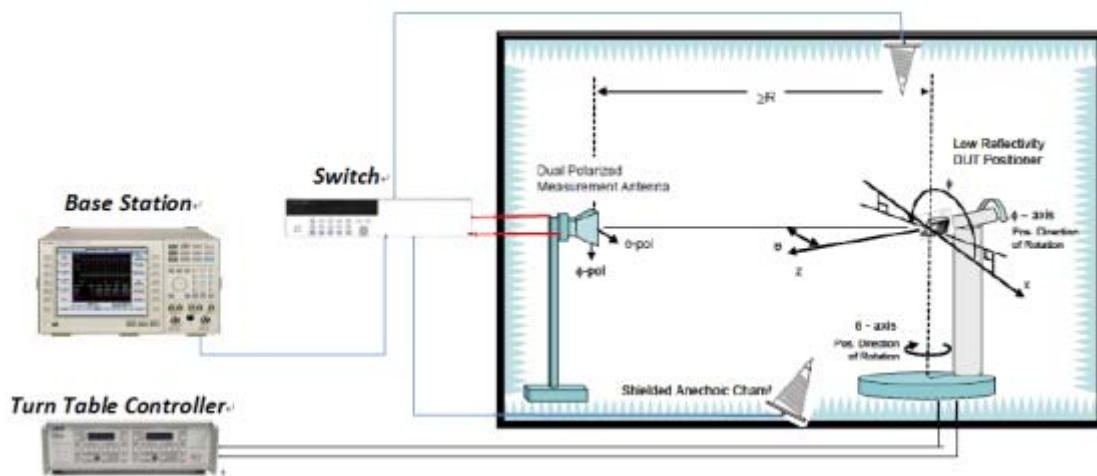

B.1.2 Radiated Power**B.1.2.1 Description**

This is the test for the maximum radiated power from the EUT. Rule Part 24.232(b) specifies, "Mobile/portable stations are limited to 2 watts e.i.r.p. Peak power and 24.232(c) specifies that "Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage." Rule Part 22.913(a) specifies "Maximum ERP. The effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts. The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts."

B.1.2.2 Test Procedures

1. In an anechoic antenna test chamber, a half-wave dipole antenna for the frequency band of interest is placed at the reference centre of the chamber. An RF Signal source for the frequency band of interest is connected to the dipole with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A known (measured) power (P_{in}) is applied to the input of the dipole, and the power received (P_r) at the chamber's probe antenna is recorded.
2. A "reference path loss" is established as $P_{in} + 2.15 - P_r$.
3. The EUT is substituted for the dipole at the reference centre of the chamber and a scan is performed to obtain the radiation pattern.
4. From the radiation pattern, the co-ordinates where the maximum antenna gain occurs are identified.
5. The EUT is then put into pulse mode at its maximum power level (Power Step 0 for PCS1900,5 for GSM 850).
6. "Gated mode" power measurements are performed with the receiving antenna placed at the coordinates determined in Step 3 to determine the output power as defined in Rule 24.232 (b) and (c). The "reference path loss" from Step1 is added to this result.
7. This value is EIRP since the measurement is calibrated using a half-wave dipole antenna of known gain (2.15 dBi) and known input power (P_{in}).
8. ERP can be calculated from EIRP by subtracting the gain of the dipole, $ERP = EIRP - 2.15\text{dBi}$.

B.1.2.3 Test Setup

B.1.2.4 Test Result of ERP

WCDMA Band V

| Frequency(MHz) | Channel No. | Power Step | ERP(dBm) | Verdict |
|----------------|-------------|------------|----------|---------|
| 826.6 | 4133 | 3 | 21.32 | Pass |
| 835 | 4175 | 3 | 21.11 | Pass |
| 846.4 | 4232 | 3 | 21.34 | Pass |

WCDMA Band II

| Frequency(MHz) | Channel | Power Class | EIRP(dBm) | Verdict |
|----------------|---------|-------------|-----------|---------|
| 1852.6 | 9263 | 3 | 23.23 | Pass |
| 1880.0 | 9400 | 3 | 23.12 | Pass |

| | | | | |
|--------|------|---|-------|------|
| 1907.6 | 9538 | 3 | 23.05 | Pass |
|--------|------|---|-------|------|

B.2 Frequency Stability (22.355/24.235)

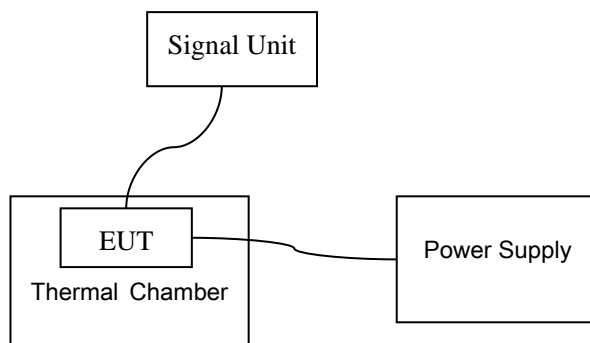

B.2.1 Description

The frequency stability shall be measured by variation of ambient temperature and variation of primary supply voltage to ensure that fundamental emission stays within the authorized frequency block. The frequency stability of transmitter shall be maintained within $\pm 0.00023\%$ ($\pm 2.5\text{ppm}$) of the center frequency.

B.2.2 Test Procedure for Temperature Variation

1. The EUT was set up in the thermal chamber and connected with the base station.
2. With power OFF, the temperature was decreased to -20°C and the EUT was stabilized for three hours. Power was applied and maximum change in frequency was recorded within one minute.
3. With power OFF, the temperature was raised in 10°C step to 50°C . The EUT was stabilized at each step for at least half an hour. Power was applied and the maximum frequency change was recorded within one minute.
4. if the EUT cannot be turned on at -30°C , the testing lowest temperature will be raised in 10°C step until the EUT can be turned on.

B.2.2.1 Test Setup

B.2.2.2 Test Results

WCDMA Band II

| Temperature ($^{\circ}\text{C}$) | Frequency Error (Hz) | ppm | Limit | Verdict |
|------------------------------------|----------------------|---------|--------------------------|---------|

| 50 | -3.57 | -0.0042 | | Pass |
| 55 | 5.66 | 0.0067 | | Pass |

B.2.3 Test Procedure for Voltage Variation

1. The EUT was placed in a temperature chamber at $25 \pm 5^\circ\text{C}$ and connected with the base station.
2. The power supply voltage to the EUT was varied from BEP to 115% of the nominal value measured at the input to the EUT.
3. The variation in frequency was measured.

B.2.3.1 Test Setup

B.2.3.2 Test Results:

| Band | Voltage (V) | Freq.Dev.(Hz) | Dev.(ppm) | Limit(ppm) | Verdict |
|------------------|-------------|---------------|-----------|--------------------------|---------|
| WCDMA Band II | 3.5 | 3.18 | 0.0017 | $\leq \pm 2.5\text{ppm}$ | Pass |

| | 4.2 | 5.16 | 0.0061 | | Pass |

B.3 Occupied Bandwidth(22.917(a)/24.238(b))

B.3.1 Description

Similar to conducted emissions; occupied bandwidth measurements are only provided for selected frequencies in order to reduce the amount of submitted data. Data were taken at the extreme and mid frequencies of the USPCS frequency band. The table below lists the measured -20dBc BW(99%).Spectrum analyzer plots are included on the following pages.

B.3.2 Test Setup

B.3.3 Test Results

Fig.6 WCDMA Band II-CH9538 Occupied Bandwidth

B.4 Emission Limit(22.917(b)/ 24.238(b))**B.4.1 Description**

The radiated spurious emission was measured by substitution method according to TIA-603C-2004. This method does not require calibration of all measuring components. Instead, the spurious output power is recorded from measuring device. Then this power level is matched by a signal from a calibrated signal generator which is substituted for the EUT. The power supplied by the generator is then equal to the power of the spurious domain emission. The power of any emission outside of the authorized operating frequency ranges must be lower than transmitter power by a factor of at least $43+10\log(P)$ dB. The spectrum is scanned from 30MHz up to a frequency including its 10th harmonic...

B.4.2 Test Procedure

1. All possible modes of operation were investigated. Only the 6 worst case emissions measured using the correct CISPR detectors, are reported. All other emission were relatively insignificant.

2. A "-ve" margin indicates a PASS as it refers to the margin present below the limit line at the particular frequency.

3. Radiated Emissions Measurement Uncertainty

All test measurements carried out are traceable to national standards. The uncertainty of the measurement at a confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2, in the range 1GHz-40GHz is ± 6.0 dB (for EUTs $< 0.5\text{m} \times 0.5\text{m} \times 0.5\text{m}$)

4. The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load which was also placed on the turntable.

5. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis.

6. Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution.

7. Sample Calculation:

EUT Field Strength (dBm) = Reading (Signal generator) + Antenna Gain (substitution antenna) - Cable loss (From Signal Generator to substitution antenna)

8. The limit is derived from $43+10\log(p)$ dB below transmitter power P (Watts)

$$= p(w) - [43 + 10\log(p)] \text{ (dB)}$$

$$= [30 + 10\log(p)] \text{ (dBm)} - [43 + 10\log(p)] \text{ (dB)}$$

$$= -13 \text{ dBm}$$

B.5 Band Edge Compliance (22.917(b)/ 24.238)

B.5.1 Description

The power of any emission outside of the authorized operating frequency ranges must be lower than transmitter power by a factor of at least $43+10\log(P)$ dB.

B.5.2 Test Procedure

1. The EUT was connected to Spectrum Analyzer and Base Station.
2. The band edge of low and high channel for maximum RF power was measured. Setting RBW is as roughly BW/100.

B.5.3 Test Setup

B.5.4 Test Results

| Band | CH | Frequency(MHz) | Result | Verdict |
|---------------|------|----------------|--------|---------|
| WCDMA Band V | 4133 | 824.2 | Fig.7 | Pass |
| | 4232 | 848.8 | Fig.8 | Pass |
| WCDMA Band II | 9263 | 1850.2 | Fig.9 | Pass |

B.6 Conducted Spurious Emission (22.917(a)/24.238(a))

B.6.1 Description

The power of any emission outside of the authorized operating frequency ranges must be lower than transmitter power by a factor of at least $43+10\log(P)$ dB. For all power levels +30 dBm to 0 dBm, this becomes a constant specification limit of -13 dBm. It is measured by means of spectrum analyzer and scanned from 30MHz up to a frequency including its 10th harmonic.

For the equipment of PCS1900 band, this equates to a frequency range of 30MHz to 19.1GHz, data is taken from 30 MHz to 20 GHz. For GSM 850, data is taken from 30 MHz to 9 GHz.

B.6.2 Test Procedures

1. The EUT was connected to Spectrum Analyzer and Base Station.
2. The middle channel for maximum RF power within the transmitting frequency was measured.
3. The conducted spurious emission for the whole frequency range was taken.

B.6.3 Test Setup

B.6.4 Test Results

| Band | CH | Frequency(MHz) | Result | Verdict |
|---------------|------|----------------|--------|---------|
| WCDMA Band V | 4175 | 835 | Fig.11 | Pass |
| | | | Fig.12 | Pass |
| WCDMA Band II | 9400 | 1880.0 | Fig.13 | Pass |
| | | | Fig.14 | Pass |

Fig.11 WCDMA Band V on Channel 4175 30MHz~3GHz

Fig.12 WCDMA Band V on Channel 4175 3GHz~9GHz

Fig.13 WCDMA Band II Channel 9400 30MHz~3GHz

Fig.14 WCDMA Band II on Channel 9400 3GHz~19.1GHz

The Conducted Spurious Emissions was checked. No emissions were found and only noise floor in 13.8GHz~19.1GHz

B.7 Peak-to-average ratio (24.232(d))**B.8.1 Description**

Power Complementary Cumulative Distribution Function (CCDF) curves provide a means for characterizing the power peaks of a digitally modulated signal on a statistical basis. A CCDF curve depicts the probability of the peak signal amplitude exceeding the average power level.

B.8.2 Test Procedure

1. The EUT was connected to Spectrum Analyzer and Base Station.
2. The CCDF of middle channel for the highest powers were measured.

B.8.3 Test Setup**B.7.4 Test Results****Limit**

Peak-to-average ratio

 $\leq 13\text{dBm}$

| Band | CH | Frequency(MHz) | Result(dBm) | Verdict |
|---------------|------|----------------|-------------|---------|
| WCDMA Band V | 4132 | 824.2 | 0.02 | Pass |
| | 4175 | 835 | 0.03 | Pass |
